## **Water Management**

### **Water conservation facilities available in the Institution**

Institutions are increasingly adopting diverse water conservation methods to address the crucial need for sustainable water management within their campuses.

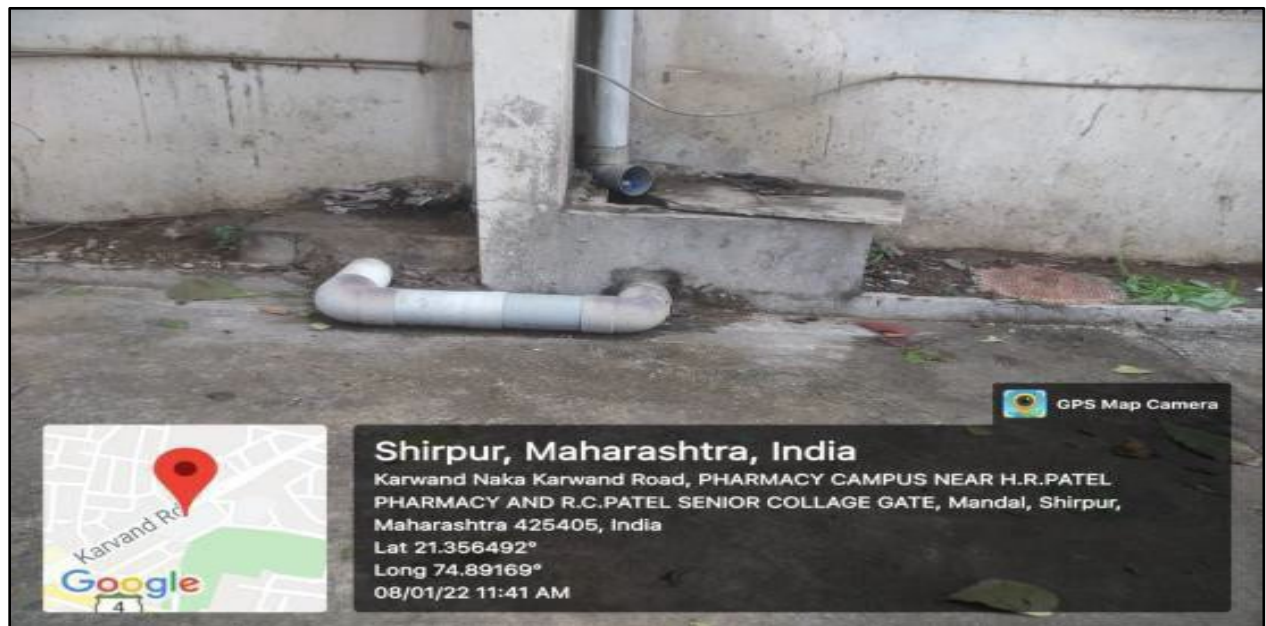

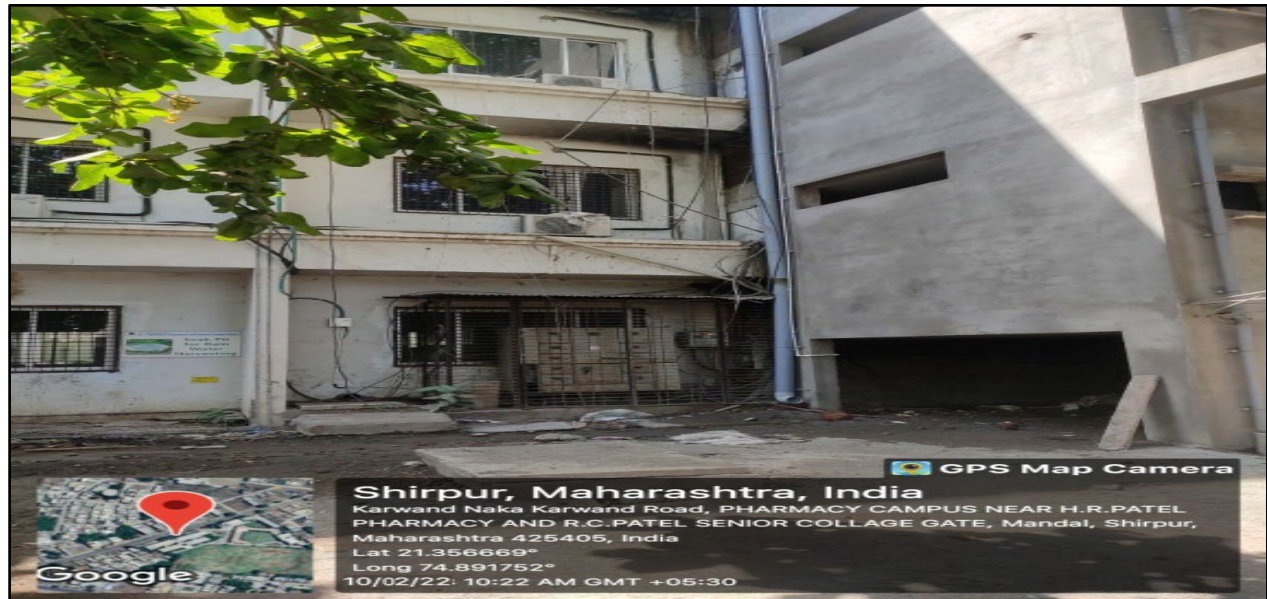

Rainwater harvesting systems are pivotal in capturing and utilizing rainwater effectively. Through strategically positioned catchment areas like rooftops and designated surfaces, rainwater is collected and let the water seep into the soil for various purposes, reducing the dependency on external water sources. The lawn that is purposefully developed proves immensely useful for rain water harvesting. Sensor based water sprinklers are set up across the lawn that saves water in large quantity.

Construction of tanks and bunds aids in water storage and retention. These structures capture runoff water, prevent soil erosion, and recharge groundwater levels, contributing to the conservation of this vital resource.

Maintenance of water bodies within the campus ensures their ecological balance and sustainability. Regular cleaning, conservation of natural water sources, and proper management of distribution systems prevent water wastage and ensure efficient usage across the institution.

Through these integrated water conservation initiatives, institutions not only manage their water resources responsibly but also instill a sense of environmental consciousness among students and staff.

# CLEAN AND GREEN CAMPUS INITIATIVES

# Clean and Green Campus Initiatives

Transforming a campus into a Green Campus involves integrating environmentally friendly practices and education to foster sustainability. This concept empowers institutions to redefine their environmental culture, developing innovative solutions to address the ecological, social, and economic challenges facing humanity. By eliminating inefficiencies, transitioning to renewable energy sources, implementing proper waste disposal procedures, sourcing eco-friendly supplies, and establishing effective recycling programs, a Green Campus can significantly reduce its environmental footprint. Instituting time-bound strategies is essential for the successful implementation of green initiatives, requiring integration into institutional planning and budgeting processes to realize the vision of a clean and sustainable campus.
